

Welcome to ER/Studio Viewer 19.0.1

[ER/Studio Home](#) | [ER/Studio Documentation](#) | [IDERA Technical Support](#) | [www.idera.com](#)

Thank you for using IDERA ER/Studio Viewer. ER/Studio Viewer provides to anyone outside of the data modeling team an interactive environment for viewing ER/Studio data models. This distributable application provides the same sophisticated and advanced viewing features offered to modelers through the native ER/Studio application. Why rely on static representations and graphical snapshots that are difficult to navigate and find information? ER/Studio Viewer displays the same DM1 model file generated by the native ER/Studio application. This enables the Viewer to provide all of the data model's underlying information, such as table and column definitions, in the same accessible format as ER/Studio. To ensure data integrity and security, ER/Studio Viewer offers no editing capabilities preventing unauthorized modifications to the DM1 file.

See the most recent documentation at the IDERA Web site, <https://www.idera.com/support/productdocuments>

WHAT'S NEW IN VERSION 19.0.1

Supports additional features for SQL Server Temporal Tables

ER/Studio Data Architect 19.0.1 includes additional support for SQL Server Temporal Tables, allowing users to designate in-memory tables and have Data Architect check whether the columns are suitable as not all datatypes are supported for in-memory. For more information about this feature, see [Microsoft SQL Server Table Storage Options](#).

Allows users to switch between open files

This release includes the addition of the **Switch Windows** button in the **Diagram** ribbon. This button allows the user to switch and view each of the different open files.

Adds the Universal Mappings button to the Repository ribbon

The new **Universal Mappings** button on the **Repository** ribbon allows users to create links between objects across models, which are visible in the Where Used tab of Objects and in Team Server Core.

Adds the Diagram Properties button to the Model ribbon

The new **Diagram Properties** button on the **Model** ribbon allows users to easily set properties for the diagram file.

Adds quotation marks to the Field Names when generating the database JSON

New options allow users to select how the plain JSON output is generated from MongoDB-specific content. For more information about this feature, see [MongoDB JSON Generation](#).

WHAT'S NEW IN VERSION 19.0

Supports Azure Active Directory Password authentication method

This version of ER/Studio Data Architect supports **Azure Active Directory – Password** as an authentication method in Azure SQL Database available in the following scenarios:

- **Reverse engineering** objects from Azure SQL Database with a direct connection.
In the **Authentication** field of the Reverse Engineering Wizard, select the **Azure Active Directory – Password** option. For more information about this feature, see [Reverse Engineering an Existing Database](#).
- **Forward engineering** to Azure SQL Database using a direct connection.
In the **Authentication** field of the DDL Generation Wizard, select the **Azure Active Directory – Password** option. For more information about this feature, see [Generating a Script File or Database](#).
- **Compare/Merge** with a live database for Azure SQL Database using a direct connection.
In the **Authentication** field of the Compare and Merge Utility, select the **Azure Active Directory – Password** option. For more information about this feature, see [Using the Compare and Merge Utility](#).

Allows users to log in to Team Server when logging into Repository

The separate Repository and Team Server login menu buttons and dialog boxes now are combined, allowing users to optionally connect to Repository and Team Server at the same time. The single **Log In** button opens a dialog box that includes areas for both components. For more information about this feature, see [Logging In and Out of the Repository and ER/Studio TS](#).

Supports the 'relates to' relationship between Business Terms and Objects

ER/Studio Data Architect now allows association between business terms in Team Server and objects in Data Architect by using the **relates to** relationship. Objects that support this capability include Entity, Table, Attribute

Column, and Domain. For more information about this feature, see the What's New topic [Supports the 'relates to' relationship between Business Terms and Objects](#).

Supports the 'where' clause for SQL Server and Azure SQL DB filtered index

ER/Studio Data Architect now supports the **where** clause for SQL Server 2008+ and Azure SQL DB filtered index. For more information about this feature, see [Microsoft Access, Azure SQL DB, and SQL Server Index Options](#).

Supports the 'Columnstore' index for SQL Server

ER/Studio Data Architect now supports the **Columnstore** index for SQL Server 2012+. For more information about this feature, see [Microsoft Access, Azure SQL DB, and SQL Server Index Options](#).

Supports Spatial Indexes for SQL Server and Azure SQL DB

The new Spatial tab in the ER/Studio Data Architect Index Editor allows users to configure geo-spatial indexes for SQL Server 2012+ and Azure SQL DB platforms. For more information about this feature, see [Spatial tab](#).

Allows users to define table and index compression for SQL Server

This version of ER/Studio Data Architect allows users to define table and index compression for SQL Server and Azure SQL DB platforms. The **Compression** option allows you to choose from row or page compression types when using compression and the **On Partitions** options lets you specify which partitions are affected. For more information about these features, see [Microsoft SQL Server Table Storage Options](#) and [Microsoft SQL Server Index Storage Options](#).

Allows users to model temporal tables in SQL Server

The ability for users to model temporal tables for SQL Server 2016 and later is now included in ER/Studio Data Architect. The **System Versioning Properties** feature allows you to select between anonymous or a named History Table when using temporal tables. For more information about this feature, see [Microsoft SQL Server Table Storage Options](#).

Supports extended properties for SQL Server Tables and Columns

The new Extended Properties tab exists for SQL Server Tables and Columns to manage a list of extended properties. You can add, edit, and delete property values and descriptions. For more information about this feature, see [Extended Properties tab Table options](#) and [Extended Properties tab Column options](#).

Supports SQL Server 2019

ER/Studio Data Architect now supports SQL Server 2019 database platform. For more information about supported databases, see [Supported Database Platforms](#).

Supports MySQL 8.0

ER/Studio Data Architect now supports MySQL 8.0 database platform. For more information about supported databases, see [Supported Database Platforms](#).

Allows users to generate MongoDB model output as plain JSON

Users now can use the **Output as plain JSON** checkbox to remove all MongoDB-specific constructs when generating a database for a MongoDB model. This option removes MongoDB constructs such as ObjectId() and instead a generic JSON is generated. For more information about this feature, see [MongoDB JSON Generation](#).

Supports Azure Synapse Analytics

ER/Studio Data Architect now supports Azure Synapse Analytics. For more information about supported databases, see [Supported Database Platforms](#).

Supports Inheritance Relationships for PostgreSQL

This release of ER/Studio Data Architect add support for Inheritance Relationships for PostgreSQL. The **Inherits** checkbox in the Properties tab is enabled only for Identifying Relationships. When this option is checked, all other properties on the Properties tab are unavailable (greyed out). For information about creating a new inheritance relationship, see [Creating a New Inheritance Relationship](#).

Allows TLS between Data Architect and Repository

This version of ER/Studio Data Architect allows you to use TLS between Data Architect and Repository. For more information about this feature, see [How to Specify Repository Ports](#).

Supports WITH CTE for SQL Server 2005+, Azure SQL DB, and Azure Synapse Analytics

ER/Studio now supports the **WITH** common table expression on Views for SQL Server 2005 and later, Azure SQL DB, and Azure Synapse Analytics. You can use a CTE clause in a CREATE VIEW statement as part of its defining SELECT statement. Note that you can apply multiple CTEs to a view and that CTEs can be recursive. For more information about this feature, see [Creating and Editing Database View With \(CTE\) tab](#).

ER/STUDIO VIEWER FEATURES

Visual Data Lineage (VDL)

Visually analyze and document how data flows through your organization without needing to inspect code. View and print data lineage diagrams from the Data Lineage tab. For more information, see "Documenting Data Extraction, Transformation, and Load" in the *User Guide*.

Repository Connectivity

Viewer users connect directly to all repository diagrams and named releases. No longer are they reliant on ER/Studio users to get the diagrams and place them on a network drive for them to access. Use Team Server Search criteria to find diagrams in the Repository.

Data Dictionary Access

Viewer users now have full access to the data dictionary of ER/Studio diagrams. Viewer users can navigate and open all dictionary object editors to browse critical information like attachment values or domain binding information.

Read-only Editor Access to All Model Objects

Unlimited viewing of Model objects such as Entities, Attributes, Relationships, Views, schema objects, and others. Viewer users have access to all properties such as storage parameters, the DDL preview, definitions/notes – everything.

Model Layout Capabilities

The Viewer displays the same sophisticated layout algorithms available in ER/Studio. The layout engines can be used to clean up a model layout prior to printing to make the model more readable.

Workstation and Concurrent Licensing

ER/Studio Viewer now has the same concurrent and workstation licensing as ER/Studio. If your viewer license has expired please contact sales@idera.com or [Support](#) to unlock it.

Object Editor Access

ER/Studio Viewer now allows the user read-only access to the property editors for all objects on the diagram and in the explorer tree. You'll have complete, detailed model information such as definitions, notes, constraints, dependency and pre/post-SQL, and relationship properties.

Entity Pop-Up Help

A customizable feature that allows the user to instantly obtain information related to the entity/table objects by hovering the cursor over the desired object. The user can customize this view by selecting text from the entity's definition, notes, attributes, keys, color properties, and more. Select "View" from the Main Menu, then select the "Model Help Settings" submenu for the complete list.

Model Explorer Browser

Easily browse and find information within the model with a familiar Explorer-type browser. Toggle between Logical and Physical Models, drill down to the attribute level while the application highlights the object on screen for easy identification.

Zoom Window

This sizable, positionable window magnifies the view of all objects on the modeling workspace underneath the cursor. This is particularly useful when navigating large models.

Customizable Model Views

Choose the level of information you wish to view within the model as it appears on the workspace. The user can choose to see the model as a series of simple entities and their relationships, can expose all of an entity's attributes, view only the primary keys, and more. In addition, the users can increase or decrease the zoom-level via a readily available toolbar selection.

Choose Your Design Notation

ER/Studio Viewer allows the user to toggle between any one of the three leading data modeling notations supported by the native ER/Studio Data Architect application: IDEF1X, Information Engineering (IE or 'Crows Foot'), and Filtered IE (hidden foreign keys).

Printing Capability

ER/Studio Viewer allows the user to print diagrams. The application has the same level of printing support available in the native ER/Studio application. A full range of printing capabilities is available, including print-to-scale, and more.

Complete ER/Studio Help Guide

Provides the same level of information found in the commercially available version of ER/Studio, including information on the data modeling notations, how to use ER/Studio's advanced graphical features, and more.

On-Line HTML Help

ER/Studio features an HTML help facility that takes advantage of the universal search and browsing capabilities of a browser based system.

ADDITIONAL RESOURCES

Licensing Your IDERA Product

All IDERA products include a 14-day trial period. To continue using the product without interruption, we recommend that you license it as soon as possible. For information on licensing your product, refer to the *Quick Start Guide*. If you have not yet purchased this product, contact sales@idera.com.

IDERA Product Support

The IDERA Web site is an excellent source for additional product information, including white papers, articles, discussion forums, and the IDERA Knowledge Base. Visit www.idera.com/support, or click any of the links below, to find:

- [Documentation](#)
- [Online Demos, Technical Articles, and White Papers](#)
- [IDERA Community](#)

IDERA Technical Support

If you have a valid maintenance contract with IDERA, the Technical Support team is available to assist you with any problems you have with our applications. Our maintenance contract also entitles registered users of IDERA products to download free software upgrades during the active contract period. Evaluators receive free technical support for the term of their evaluation (14 days).

We encourage you to open technical support cases via the [Customer Support Center](#). For additional information about IDERA Technical Support, visit the [Support](#) section of our Web site.

IDERA on the Web

To download evaluations of other IDERA products or to learn more about our company and our products visit us at www.idera.com.
